DETAILED ACTION

Claim Objections

Claims 4-16 have been objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-16 have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 have been rejected under 35 U.S.C. 102(b) as being clearly anticipated by Shaffer, 6550965.

Claims 1 and 3 have been rejected under 35 U.S.C. 102(b) as being clearly anticipated by Scheibner, 4363345.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 has been rejected under 35 U.S.C. 103(a) as being unpatentable over Scheibner, 4363345. Scheibner discloses ribs (21, 22) on the exterior portion of a web

and a rib (19) on the interior portion of the other web. The claim requires striations, i.e., a plurality of ribs, on the interior portion of the other web. It would have been obvious to add an additional duplicate rib on the interior portion of the other web to further improve the gripping friction between the user's fingers and the web.
